

WAF Lab Assignment 3

1. Write a JavaScript program to declare variables of different data types and display their values on a web page.
2. Write a JavaScript program to perform addition, subtraction, multiplication, division, and modulus of two numbers using functions and display the results on a web page.
3. Write a JavaScript program to calculate the area and perimeter of a rectangle using functions and display the results on a web page.
4. Write a JavaScript program to convert temperature from Celsius to Fahrenheit and vice versa using functions and display the results.
5. Write a JavaScript program to determine whether a given number is even or odd using conditional statements and display the result on a web page.
6. Write a JavaScript program to find the largest of three numbers using if-else statements and display the result.
7. Write a JavaScript program to calculate the factorial of a given number using a loop and display the result.
8. Write a JavaScript program to generate the multiplication table of a given number using a for loop and display it on a web page.
9. Write a JavaScript program to calculate the sum of the first N natural numbers using a loop and display the result.
10. Write a JavaScript program to check whether a given number is prime using loops and conditional statements.
11. Write a JavaScript program to count the number of digits in a given integer using a while loop and display the result.
12. Write a JavaScript program to reverse the digits of a given number using a loop and display the result.
13. Write a JavaScript program to implement a simple calculator using the switch statement for arithmetic operations.
14. Write a JavaScript program to calculate the total, average, percentage, and grade of a student using functions and conditional statements.
15. Write a JavaScript program to change the text of an HTML element dynamically using DOM manipulation.
16. Write a JavaScript program to change the background color of a web page when a button is clicked using DOM manipulation.
17. Write a JavaScript program to accept user input through HTML form elements and display the entered information dynamically using the DOM.
18. Write a JavaScript program to create a counter with Increment, Decrement, and Reset buttons using functions and DOM manipulation.
19. Write a JavaScript program to display all even and odd numbers within a specified range using loops and DOM manipulation.
20. Write a JavaScript program to build a mini web-based calculator that performs basic arithmetic operations using JavaScript functions, event handling, and DOM manipulation.
